GENERAL RULES

1. **Colleges offering B.E./B.Tech** programmes and those affiliated with the Manipal Academy of Higher Education (MAHE) are **eligible to participate**. (*BCA and Polytechnic colleges are NOT eligible*).
2. **All team members must belong to the same institute/university.**
3. MIT-MAHE will book **hostel accommodation** on request for outstation participants on a **first-come, first-served basis**, subject to availability. However, participating institutions must bear expenses for travel, accommodation, food, and incidental charges.
4. All participants must register through the official portal. **The Flagship Pass grants access to both flagship and general events**, whereas the General Pass permits participation only in general events. However, General Pass holders may upgrade to a Flagship Pass at a later stage.
5. All participants must carry their college ID Cards along with them at all times.
6. Participants should report at least 15 minutes before the start of the event and be ready to compete.
7. To ensure fairness, participants may be identified only by their delegate ID or team ID during the event. Any disclosure of personal identity or institutional affiliation in any form shall result in disqualification.
8. To avoid disputes regarding time, time will be kept by authorised personnel and displayed prominently.
9. **The decision of the Judges and/or the Core Committee will be final and binding.** However, in the event of any genuine dispute or objection, the individual or any one member of the team may submit a memorandum through the website within one hour of announcing the results. The matter shall be reviewed by the *Panel of Referees* consisting of the delegate(s) of the Student Welfare Office, one of the Judges of the particular event (subject to availability), Conveners, Co-conveners, Core Committee members and/or the respective stakeholders related to the event, and if found genuine, the position may be reviewed and changed. However, if the objection is deemed incorrect, the objecting individual/team would lose the given position (if any), and the next individual/team would be considered for their position. *The Standard Operating Procedure (SOP) for this process will be made available on the official website.*
10. The organisers are not responsible if a participant is unable to attend an event due to scheduling clashes with another event.
11. The organisers will provide only the basic infrastructure necessary for the event (e.g., power supply, internet access where applicable). All other requirements should be arranged by the respective colleges.
12. **The event will be cancelled if there are fewer than the minimum required entries.**
13. The organisers are not responsible for the loss of valuables or personal belongings of participants.
14. Participants must strictly adhere to the rules in both letter and spirit. **Use of unfair means in any form will lead to disqualification.**

15. All **official communication**, including details regarding prize money reimbursement and certificates, will be sent to the **registered email ID**. Participants must ensure that the registered email ID is active and regularly accessed, and are advised to check it frequently during and after the fest.
 16. Participants engaging in misconduct, misbehaviour with organisers/support staff (including external agencies), or violations of punctuality requirements or the use of vulgar or abusive language will be disqualified.
 17. **Possession or distribution of alcohol, drugs, or any other illegal/prohibited items is strictly forbidden.** Any individual or team found in violation shall face disqualification, immediate removal from the premises, and disciplinary action.
 18. The convener or core committee reserves the right to postpone or cancel any event under unavoidable or unforeseen circumstances.
 19. Photographs and recordings from the events may be used by the organisers for promotional, documentation, and archival purposes.
 20. Participation, adherence to the rules, and sportsmanship are more important than winning. Participants are expected to accept victory with humility and defeat with grace and a sportive spirit. Any unruly or violent expression of joy or disappointment may result in disqualification.
-

ACUMEN

HOPELESS OPUS

Event Description:

Hopeless Opus is an immersive online RPG and choice-based story game crafted by Acumen for TechTatva. Set in a world where every decision shapes your fate, it challenges players to think, adapt, and uncover the truth behind a mysterious, collapsing realm. With interactive storylines, mind-bending mini-games, and branching paths that test logic and emotion alike, Hopeless Opus turns every choice into a consequence - and every player into the author of their own destiny.

Type of Event: Regular

Number of Rounds: 3

Team Size: 1 - 2

Rules and Regulations

Round 1: Getting Used to the Game

This round serves as a practice session. Players get introduced to the interface, controls, and format. The program includes simple tech-themed mini-games for familiarisation. All teams continue in the game and there's no disqualification in this round.

Round 2: Exploring the Backstory

Teams progress into the storyline, encountering difficult choices that affect outcomes. Branching paths create unique narratives, and each leads to a different minigame and story. A leaderboard is generated at the end using in-game performance stats.

Round 3: Choices Have Consequences

In this final round, players face story-driven challenges with real consequences. Tech-based mini-games become harder and tightly integrated into the story. A final leaderboard determines winners based on performance.

Judging Criteria

Round 1
No disqualification occurs in Round 1. Points are accumulated from the beginning but Round 1 is not judged.
Round 2
Top 15% of the total teams that complete Round 2 gets to play Round 3, for rest of the people story ends there itself.
Round 3
The top 3 teams after completing Round 3 are declared the winners.

Disqualification Criteria

- Use of unfair means, such as sharing answers.
- Mishandling or exploiting the online platform.

TESSERACT

Event Description:

Tesseract is a campus-wide treasure hunt that combines the thrill of deciphering clues with a series of interactive technical challenges. The event begins with a quiz, after which teams set out across the campus, solving clues and completing tasks at each checkpoint to uncover the next stage of the hunt. As the story unfolds, teams must use their problem-solving, technical skills and teamwork to piece together the trail and make their way towards the final challenge.

Type of Event: Regular

Number of Rounds: 3

Team Size: 2 - 4

Rules and Regulations

Round 1: Rapid-Fire Quiz

A fast-paced quiz testing logical reasoning, aptitude, and general problem-solving. Filters out the most agile thinkers for the next stage.

Round 2: The Riddle Trail

Qualified teams solve riddles, leading them across campus. Each correct answer reveals the following location, and only the first eight teams to complete the trail move on.

Round 3: The Final Gauntlet

A final treasure hunt where qualified teams follow a series of clues and navigate across campus, completing challenges along the way. Each completed challenge leads them closer to the final destination. Time penalties apply for failures, and the first team to successfully complete the gauntlet wins.

Judging Criteria

Round 1
Teams are scored based on accuracy and speed. The top 30 teams advance.
Round 2
Teams are ranked based on their order and time of arrival at the final destination for Round 2. The top 8 teams qualify for the final round.
Round 3
The first 3 teams to reach the final location in the shortest time are declared the winners.

Disqualification Criteria

- Interfering with or copying from other teams.
- Stealing clues, tokens, or materials.
- Taking help from non-participants.

BIZCOMM

QUANT QUEST

Event Description:

Quant Quest is a two-day competition where teams of 2-3 learn the basics of trading, design their own trading strategy, and put it to the test using real market data. Teams will compete across three rounds, with the final rankings based on strategy performance, decision-making, and implementation.

Type of Event: Regular

Number of Rounds: 3

Team Size: 2 - 3

Rules and Regulations

Participants are required to download the FellaRide app and join the official Bizcomm community for all event updates, announcements, and further instructions.

Round 1: Introduction to Quantitative Trading Workshop

Participants will attend an interactive workshop covering the foundations of quantitative finance and algorithmic trading.

Topics include:

- Market Structure and Algorithmic Trading Fundamentals.
- Mean Reversion and Momentum Strategies.
- Statistical Arbitrage and Pairs Trading.
- Principal Component Analysis (PCA) in Finance.
- Risk Management and Portfolio Construction.
- Backtesting methodologies.
- Performance Metrics such as Sharpe Ratio, Drawdown, and Alpha.
- Introduction to Python tools used in Quantitative Finance.

This round is compulsory for all participants.

Round 2: Strategy Design & Framework

Teams will design a rule-based quantitative trading strategy without writing any code. Participants must develop a complete trading framework and present it through a flowchart and technical explanation.

Teams must include:

- Trading objective or market inefficiency being targeted.
- Data acquisition methodology.

- Feature generation and signal creation.
- Buy/Sell decision rules.
- Risk management framework.
- Position sizing methodology.
- Portfolio management approach.
- Backtesting plan.
- Python libraries and tools planned for implementation.

Top-performing teams will advance to the final round.

Round 3: Strategy Implementation & Evaluation

Shortlisted teams will implement their proposed strategy in Python using a provided dataset.

Teams will:

- Develop and test their trading strategy.
- Generate trading signals and portfolio allocations.
- Backtest their strategy on historical data.
- Present performance metrics and key insights.
- Justify implementation and optimization decisions.

Final rankings will be based on both strategy performance and technical implementation.

Judging Criteria

Round 2: Strategy Design & Framework	
Originality and Practicality of Strategy	10 Points
Quantitative Reasoning	10 Points
Risk Management Approach	10 Points
Technical Feasibility and Presentation	10 Points
Round 3: Strategy Implementation & Evaluation	
Risk-Adjusted Returns	15 Points
Sharpe Ratio and Performance Metrics	10 Points
Maximum Drawdown Management	10 Points
Consistency and Robustness	15 Points
Code Quality, Documentation, and Innovation	10 Points

Disqualification Criteria

- Plagiarism of strategy designs or code.
- Use of unauthorized datasets or external assistance.

- Violation of event rules or organizer instructions.
- Submission after the specified deadline.
- Any unfair means during evaluation.

MONOPOLY

Event Description:

A strategy-driven business simulation where teams manage a 100 million virtual fund, participate in company and technology auctions, and strategically form alliances. Teams must make informed investments, negotiate with other teams, and develop a viable business plan leveraging their acquired technologies. Alliances then pitch and defend their proposed business model before a panel of judges. The competition tests strategic thinking, financial decision-making, negotiation, market analysis, teamwork, and presentation skills. Only **10 teams** will be participating in this event.

Type of Event: Flagship

Number of Rounds: 4

Team Size: 1 - 4

Rules and Regulations

Participants are required to download the FellaRide app and join the official Bizcomm community for all event updates, announcements, and further instructions.

Round 1: Company Auction

- Each team must use their unique FellaRide referral link/code to bring in referrals through the FellaRide app.
- The referral window will close just before the online quiz starts- referrals made after this will not be counted.
- All registered teams must participate in the online quiz round.
- Only the top 10 scoring teams will qualify for the main MONOPOLY event.
- In case of a tie in quiz scores, the team with the higher number of FellaRide referrals will be ranked higher and given preference for qualification.
- If referral counts are also tied, the time taken by each team to complete the quiz will be used as the final decision factor.
- The quiz result and qualified team list will be announced by the end of the day.

Round 2: Technology Auction & Alliance Formation

- Each team begins the competition with a virtual purse of ₹100 million, which carries forward throughout the competition.
- For every successful referral, the team will receive ₹2 million virtual funds added to their MONOPOLY starting capital.
- Teams must strategically manage their funds across all rounds.
- In the first auction, each team may acquire only one company.
- There are 10 companies available for auction for 10 participating teams.
- To place a bid, a team must raise its paddle and announce the amount it wishes to bid.
- All bids must be in multiples of ₹5 million.
- Once a team successfully acquires a company, it cannot participate in further company bidding in this round.
- Technologies will be presented individually for auction.
- A team may bid for a technology only while that technology is being presented.
- In this technology auction, teams may acquire one technology; however, only 8 technologies will be available for 10 teams, creating strategic competition.
- Bids must be made in multiples of ₹5 million.
- Teams must carefully balance their remaining funds against the strategic value of the technologies they wish to acquire.
- Referral count will be verified directly from the FellaRide app's official records.
- Referral funds will be credited to the team's virtual account before the auction round begins.

Round 3: Crisis Simulation with Live Twist and Cross-Questioning

- Following the auctions, teams will have 1 hour 15 minutes to negotiate and form alliances.
- Alliances may be formed only when both participating parties agree.
- An alliance can consist of a maximum of two companies/teams.
- Teams may strategically form alliances with companies that own relevant technologies.
- Alliances can only be formed after all technologies have been auctioned.
- Each alliance must develop a business plan based on its available companies, technologies, and resources.
- The business plan must be presented to and defended before a panel of judges.
- Teams may use the internet for market research and analysis.

Round 4: Business Plan Presentation

- Each alliance will pitch its proposed business plan before the judging panel.
- The presentation must demonstrate how the participating companies and acquired technologies can be integrated into a viable business model.
- The presentation must include relevant data analysis within the presentation itself.

- Teams may use Canva/PowerPoint/Slides or any other relevant presentation software.
- The presentation may contain a maximum of 3 content slides, excluding the cover and thank-you slides.
- Teams must be prepared to defend their business decisions, strategy, and alliance before the judges.

Judging Criteria

Criteria	Evaluation
Business Plan & Strategy	Viability, creativity, strategic strength and effective use of acquired assets.
Technology Integration	Relevance and effectiveness of integrating the acquired technology into the business.
Market & Data Analysis	Quality, relevance and interpretation of market research and data.
Financial Strategy	Efficient utilisation of the ₹100 million purse and quality of investment decisions.
Alliance Strength	Logic, synergy and strategic value of the alliance.
Presentation	Clarity, structure, confidence and overall presentation quality.
Defence & Q&A	Ability to justify decisions and respond effectively to questions.
Flaws/Penalties	Weaknesses, inconsistencies or impractical aspects of the proposed plan may result in negative points.

Disqualification Criteria

- Violating the auction or bidding rules.
- Attempting to acquire more companies/technologies than permitted.
- Forming an alliance exceeding the permitted two-company limit.
- Forming alliances before the technology auction has concluded.
- Using unfair means, manipulation, or undisclosed external assistance to gain an advantage.
- Misrepresenting information or deliberately misleading the judges/organisers.
- Any behaviour that disrupts the event or violates the instructions of the organisers.
- Failure to submit or present the required business plan within the stipulated time.
- Any other serious violation deemed sufficient for disqualification by the event organisers.

QUANDARY

Event Description:

Quandary is a structured, multi-round business simulation designed to evaluate decision-making, strategic thinking, leadership capability, and adaptability under pressure.

The event progresses through three distinct rounds, beginning with individual decision-making, moving into leadership and team formation, and culminating in a high-stakes crisis management simulation with live challenges.

Type of Event: Regular

Number of Rounds: 3

Team Size: 1 - 4

Rules and Regulations

Before Round 1, participants are required to download the FellaRide app and join the official Bizcomm community for all event updates, announcements, and further instructions.

Participants must also share their unique referral code with their friends, family, and contacts. Successful referrals will be counted as bonus points and will be taken into consideration along with Round 1 merit during the CEO selection for Round 2.

Round 1: Online (Individual Round)

- Duration: 30 minutes
- Each participant will be presented with a two-line business problem requiring critical decisions.
- Task Requirements: Each participant must submit:
 - Three proposed business decisions
 - One major risk identified in the given scenario
- Participants will be selected depending upon the answers they give, and they will be assigned roles.

Round 2: CEO Auction and Team Formation (OFFLINE)

- Based on the results of Round 1, top-performing individuals will be designated as CEOs.
- Remaining participants draw chits to determine their specific roles as CFO, CTO, CMO.
- Each CEO will receive 100 bidding points to build their leadership team.
- Remaining participants will submit one anonymous line of self-pitch for a targeted role (CFO, CMO, CTO).
- Participants unable to form teams will be eliminated.

- **Auction Process:**

- Anonymous Evaluation – CEOs review participant role-pitches.
- Timed Bidding – CEOs bid for team members with a 20-second limit per bid.
- Team Formation – Each CEO must assemble a team comprising a CFO, a CMO and a CTO.
- Revelation Stage – The team is revealed with a problem statement, company name and a twist.

Round 3: Crisis Simulation with Live Twist and Cross-Questioning (OFFLINE)

- Each team will present its solution for the problem statement given the previous day.
- Cross-questioning is also included (3 minutes).
- **Live Twist Mechanism:**
 - At the beginning of the presentation, teams will draw a Twist Card which introduces an unrelated, additional challenge.
 - Teams must integrate this twist into their original crisis solution.

Pitch Rules:

- Presentation Duration: Maximum 8 minutes
- 5 minutes - Addressing the primary crisis
- 2 minutes - Solution for the twist card
- 1 minute - Integrated wrap-up

Judging Criteria

All Rounds
Main Crisis Solution
Creativity and Innovation
Risk Identification and Innovation
Presentation and Communication Skills
Team Coordination and Role Execution
Cross-Question Defence

Disqualification Criteria

- Violation of the rules of each round.
- Using unfair means, manipulation, or undisclosed external assistance to gain an advantage.
- Any behaviour that disrupts the event or violates the instructions of the organisers.
- Failure to submit or present the required business plan within the stipulated time.

- Any other serious violation deemed sufficient for disqualification by the event organisers.
-

CACHED

CRYPTIC FINDS

Event Description:

Cryptic Finds is a thrilling virtual adventure where participants follow a gripping storyline to uncover hidden flags. Each flag reveals new clues and challenges, some requiring coding skills, blending problem-solving with narrative progression. The event features a diverse mix of Open-Source Intelligence (OSINT) challenges, riddles, and puzzles, all infused with a technical twist.

Type of Event: Regular

Number of Rounds: 1

Team Size: 1 - 3

Rules and Regulations

- Teams of up to three members solve challenges that combine scavenger hunt elements with technical coding and OSINT tasks. Each flag found advances the story and unlocks the next set of challenges.
- Teams submit the correct flag to advance to the next chapter and unlock additional tasks.
- Points are earned for each flag discovered and every challenge successfully completed.
- There is no per-question time limit; teams can solve puzzles at their own pace within the 36-hour event window.
- Fair play and respect are expected, and all teams must always maintain fairness and show respect to others.

Judging Criteria

All Rounds
Number of flags found, as displayed on the real-time leaderboard, and the associated timestamps.
In the event of a tie, the team that reached the score first is ranked higher.

Disqualification Criteria

- Publishing or sharing flags through any medium, including social media, forums or direct messages, will result in disqualification.
- Tampering with the event platform or disrupting the participation of other teams is strictly prohibited and leads to disqualification.
- Copying or using flags that other teams have submitted also results in immediate disqualification.

MIT OPEN

Event Description:

This thrilling coding contest is the crown jewel of TechTatva, offering participants a two-day journey through the exhilarating world of competitive programming. Designed in the prestigious ACM-ICPC style, the event challenges teams to think quickly, collaborate effectively, and solve intricate problems under pressure, with some twists.

Type of Event: Regular

Number of Rounds: 3

Team Size: Solo or Duo for Round 1; Duo from Round 2 onward.

Rules and Regulations

Round 1: Online Qualifier

Teams of one or two members participate in an online coding contest. The top 40 teams, made up of x pairs and y individuals such that $x + y = 40$, qualify for the next round. If the number of solos is even, each solo will be randomly paired with another solo from within the top 40 to form duo teams. If the number of solos is odd, the last unmatched solo among the top 40 will be paired with the top-ranking solo outside the qualifying group, so every team moving to Round 2 is a duo. No team outside the registered participants or below the ranking cutoff, except for the case of an odd solo, may be added.

Round 2: Blind Coding

All teams now consist of two members after the merging process. In this round, only one team member can view the screen, while only the other member can use the keyboard. Communication and strategy are crucial, as visibility and control are separated. Only the top 10 teams, ranked by performance, progress to the next round.

Round 3: Swap Lockout Finale

The qualifying teams face a series of coding problems in a combined swap and lockout format. Each team has one member coding at the computer while the other remains idle; after

every 15 minutes the teammates swap roles, so the ability to pick up and continue a teammate's work is essential. If a team solves a problem first, that problem and its corresponding points are locked and can no longer be attempted by other teams, creating a race to claim the most demanding and most rewarding challenges. The top 3 teams at the conclusion of this round receive the event prizes.

Judging Criteria

All Rounds
Total points awarded according to problem difficulty and the number of test cases passed.
Ties broken by the fastest overall completion time.
Teams are shortlisted round by round on the basis of the same ranking.

Disqualification Criteria

- The use of AI-generated or plagiarised code in Round 1 is prohibited.
 - Interfering with other teams or disrupting their progress results in disqualification.
 - Copying solutions or code from other participants is strictly prohibited and leads to disqualification.
 - Accessing restricted sites such as ChatGPT, BlackBox or Perplexity during offline rounds will result in disqualification.
-

CHROMA

THE SOCIAL NETWORK

Event Description:

Social Network is a fun-filled interactive challenge where participants battle it out in quick mini-games involving trivia, logical thinking, tech knowledge, reflexes, and friendly competition. Every victory earns the chance to splash the opponent with water, making the event an exciting mix of brains, speed, and entertainment. Compete one-on-one or in teams, survive the challenges, and prove that you have both the skills and the spirit to dominate the Social Network arena.

Type of Event: Regular

Number of Rounds: 1

Team Size: 1

Rules and Regulations

- **Fun General Quiz:**
 - Participants will solve 5-10 questions based on general aptitude and logical reasoning, basic programming and technical skills.
 - Winner gets to throw a water cup on the loser team/individual.
- **Water Ball Pong:**

6 cups filled with water are stacked for the game. Participants compete one-on-one by attempting to throw the ball into their opponent's cups. The participant whose cup remains standing last wins.
- **Tech- Wrong answers only quiz:**

Participants who give the correct answer get water thrown on them.
- **Catch the balloon:**

2 participants compete, and the first participant to drop the balloon gets water thrown on them.
- **Rapid Fire:**

Participants answer simple technical questions within 3 seconds. Those who fail to answer in time get water balloons thrown at them.

Judging Criteria

All Rounds
Performance in 1v1 and 2v2 matches.
Accuracy, speed, and successful completion of the mini-game objectives.
Winners are determined based on the rules specific to each mini-game.

Disqualification Criteria

- Use of unfair means, cheating, or external assistance.
- Misconduct, unsportsmanlike behaviour, or disrupting the event.
- Failure to follow event coordinators' instructions.
- Failure to complete the assigned round within the stipulated time.

Prize Pool:

Winners win badges, stickers and goodies.

TRIAD TACTICS: AI GAME ARENA

Event Description:

Triad Tactics is a three-round AI competition consisting of Bluff, UNO, and Chess. Teams develop and submit machine-learning models or fine-tuned language models that compete under a standardised evaluation harness. The first two rounds focus exclusively on machine-learning models and algorithms, while the Chess round requires fine-tuning an approved LLM without algorithmic game-playing components.

Type of Event: Regular

Number of Rounds: 3

Team Size: 1 - 5

Rules and Regulations

- The 24-hour period applies to development, testing, iteration, and submission preparation for all three rounds.
- Each team may submit only one submission per game.

- A live testing system will allow teams to submit their current models during the event, receive performance feedback, and iteratively tune their models.
- Participants will be provided the official evaluation harness and a Docker file so that participants can reproduce the evaluation environment locally.
- Participants must ensure that their submissions run correctly with the provided harness and produce outputs in the format defined by the organizers.

Round 1: Bluff

- Participants will develop a machine-learning model to play Bluff against other submitted models.
- Only machine-learning models are permitted. LLMs and language-model-based agents are not permitted.
- The organizers will provide the game repository and evaluation harness.
- Participants must install and run the provided environment using the specified setup procedure, including uv where applicable.
- The submitted model must accept the APIs and inputs provided by the organizers and must return outputs in the predefined format.
- The game logic and API behaviour will follow the official Bluff rule set defined by the organizers.
- No external tools, human intervention, or unauthorized communication may be used during evaluation.
- Matches may continue until a final player/team remains, allowing a complete ranking of submissions.

Round 2: UNO

- Participants will develop a machine-learning model to play UNO against other submitted models.
- Only machine-learning models are permitted. LLMs and language-model-based agents are not permitted.
- The organizers will provide the game repository and evaluation harness.
- Participants must install and run the provided environment using the specified setup procedure, including uv where applicable.
- The submitted model must accept the APIs and inputs provided by the organizers and must return outputs in the predefined format.
- Game interactions and permitted actions will follow the official UNO rulebook as specified by the organizers.
- No external tools, human intervention, or unauthorized communication may be used during evaluation.
- Matches may continue until a final player/team remains, allowing a complete ranking of submissions.

Round 3: Chess

- Participants will fine-tune a language model and/or develop a harness to play Chess against other teams' fine-tuned models.
- Participants may use only the language models included in the organizer-provided list of approved models for the Chess round.
- The objective is to fine-tune and/or develop a harness for the pre-approved LLM for Chess performance.
- No external chess algorithms, chess engines, search algorithms, rule-based move-selection systems, or other algorithmic game-playing components may be used.
- The submitted system must rely on the fine-tuned LLM for move generation.
- The LLM will not be permitted to access the internet, external tools, external APIs, search engines, or other external information sources during evaluation.
- The final Chess ranking will be determined using a tournament-style format.
- Only one Chess submission may be submitted by each team.

Judging Criteria

All Rounds
The final ranking will be based on a weighted aggregate score across the three rounds.
The proposed weighting is 25% Bluff, 25% UNO, and 50% Chess; the final weighting is subject to confirmation by the organizers.
Bluff and UNO rankings will be determined from the final standings produced by the competition system.
Chess rankings will be determined through a tournament-style evaluation.
The top three teams in the overall combined ranking will receive the primary prizes.
If the available budget permits, additional prizes may be awarded to the top-performing team in each individual round.
During live testing, teams may receive performance feedback and use it to improve their submission before the final evaluation.
Only the final valid submission submitted within the official submission window will be considered for final scoring.

Disqualification Criteria

- Submitting more than one submission for the same game.
 - Using LLMs in the Bluff or UNO rounds.
 - Using chess engines and external algorithms is prohibited in the Chess round.
 - Using a model that is not included in the organizer-approved model list for the Chess round.
 - Accessing the internet, external tools, external APIs, search engines, or other unauthorized resources during chess evaluation.
 - Manual intervention, communication, or modification of a submission while it is undergoing official evaluation.
 - Submitting a model or program that does not run correctly with the organizer-provided evaluation harness or does not follow the required input/output format.
 - Tampering with the evaluation harness, game environment, leaderboard, scoring system, or infrastructure.
 - Attempting to exploit implementation bugs or vulnerabilities in the evaluation infrastructure instead of participating according to the intended game rules.
 - Plagiarism, unauthorized collaboration, or submission of another team's work.
 - Any attempt to interfere with another team's submission, model, environment, or evaluation.
 - Any other behaviour deemed unfair, disruptive, or contrary to the official competition rules by the organizers.
-

COGNITIA

DATA TYCOON

Event Description:

A battle of strategy and numbers awaits in Data Tycoon, where participants step into the shoes of business leaders tasked with turning struggling companies into market leaders. Armed with data, a virtual investment budget, and an ever-changing business landscape, teams must uncover opportunities, weigh risks, and make decisions that could make or break their company. Every investment comes with consequences, and every move shapes the road ahead. With competitors closing in and uncertainty around every corner, only the sharpest decision-makers will rise to the top.

Type of Event: Regular

Number of Rounds: 3

Team Size: 2 - 3

Rules and Regulations

Round 1: Industry Selection

Teams analyse datasets from five industries and identify key opportunities, risks, and trends. They then submit an Industry Preference Form ranking their preferred industries. Industry allocation is carried out based on completion order while maintaining balanced distribution. All teams proceed to Round 2.

Round 2: The Turnaround

Teams take charge of a struggling company within their allocated industry. Using financial, customer, competitor, market, and operational data, teams allocate a virtual investment budget across strategic areas. A predefined simulation system evaluates the impact of their decisions. The top 8 to 10 teams proceed to Round 3.

Round 3: Black Swan Event

The finalists will be presented with an unexpected situation that will challenge their existing strategy. Teams must analyse the new circumstances, adapt their approach, and make decisions that maximise their overall performance.

The team with the highest final score will be declared the winner.

Judging Criteria

Round 1
Quality of Analysis and Insight Discovery.
Round 2
Strategic Decision-Making and Business Performance.
Round 3
Crisis Management and Strategic Adaptability.
Additional
Final scores will be determined by the predefined simulation system.
Submission time will serve as a tiebreaker where applicable.

Disqualification Criteria

- Use of unauthorised external assistance.
- Sharing datasets or solutions with other teams.
- Manipulation of simulation files or evaluation systems.
- Failure to submit within the specified deadline.
- Any form of cheating or misconduct.

THE LAST DATASET

Event Description:

A biological catastrophe has overrun the city, and the military's last hope for humanity lies hidden within a fragmented Extraction Archive. With the city at Danger Level Red and a rescue helicopter waiting beyond a locked helipad, participants must navigate a tactical survival map, scavenge abandoned locations, uncover hidden evidence, and recover fragments of the lost archive. As they progress through the infected zones, they must protect themselves from the zombies, reconstruct fragmented survivor records and use their intelligence to separate authentic information from corrupted and manipulated data. The recovered archive then becomes the foundation for a machine-learning challenge: predicting which current survivors are most likely to endure the catastrophe. But survival is only the beginning. With every move carrying risk and every recovered fragment bringing them

closer to escape, only teams that can survive the city and the zombie attacks, can reach the end.

Type of Event: Regular

Number of Rounds: 1

Team Size: 1 - 2

Rules and Regulations

Teams will have 24 hours to unravel hidden clues, analyse fragmented evidence, and make critical data-driven decisions. As the investigation unfolds, participants will progressively uncover the information and challenges needed to advance through the mission, with each discovery revealing another piece of the larger puzzle. Performance throughout the challenge will determine the final rankings, with the top 3 teams receiving prizes.

Judging Criteria

General
Leaderboard Performance: 100%
Final ranking is based on model performance and successful completion of competition objectives.

Disqualification Criteria

- Sharing data, clues, or solutions with other teams.
 - Use of unauthorised external datasets.
 - Tampering with submissions or leaderboard data.
 - Any form of cheating or violation of competition rules.
-

COSMIC CON

CELESTIAL LABYRINTH

Event Description:

The event begins with a Cosmic Quiz, where all participating teams will put their astronomy knowledge and logical reasoning skills to the test. Only the top 40-50 teams with the highest scores will advance further.

The next stage is a thrilling Building Escape challenge, where teams race against the clock to escape a multi-floor building. Starting from the highest floor, teams must explore rooms, overcome obstacles, and solve a series of astronomy and physics-based puzzles to decode passwords and unlock their way to the next floor. The first team to successfully clear every floor and escape the building emerges victorious.

Type of Event: Flagship

Number of Rounds: 2

Team Size: 2 - 3

Rules and Regulations

Round 1: Cosmic Quiz

All participating teams must take a quiz, and only the 40-50 teams with the highest scores will advance to the next round. The quiz will be based on astronomy questions and logical reasoning.

Round 2: Building Escape

The team must escape a building before the timer runs out. Starting from the highest floor, they must find and solve puzzles in each room that will lead them to the next lower floor. After clearing all the floors, the first team to finish wins. To clear each floor, the teams must decode a password by solving a specific number of astronomy and physics-based puzzles in each room. To find these puzzles, they will need to search throughout the rooms. While searching and solving puzzles, the teams will face various obstacles, making their escape even more challenging.

Judging Criteria

Round 1: Quiz Round
The top 40 to 50 teams with the highest scores move on to the next round.
Round 2: Escape Room
The first 3 teams to clear the building before the timer runs out or are nearest to escape will be awarded cash prizes.

Disqualification Criteria

- If participants do not report before the start of the event.
- If any of the team members hinder other team members while participating.
- If any of the team members are using their phones.

STARLOCK HOLMES

Event Description:

Starlock Holmes and the Blood on the Event Horizon was introduced for the first time last year and proved to be an overwhelming success. The event captivated participants and spectators alike. Due to the enthusiastic response and the high level of engagement, we are excited to host it once again this year.

Starlock Holmes and the Blood on the Event Horizon is an innovative and immersive cosmic murder mystery that challenges participants' intellect, teamwork, and creativity. Combining the excitement of a real-life murder investigation with the intrigue of a detective story set against an astronomical backdrop, teams will solve puzzles, interrogate suspects, and piece together clues in a thrilling race against time.

Type of Event: Regular

Number of Rounds: 5

Team Size: 2 - 3

Rules and Regulations

Round 1: "The Incident Report" - Case File Puzzle

- Participants will receive a secret case file containing redacted information, riddles, clues, and hidden messages.
- Optionally, a short crime scene video or voiceover may be presented.
- Their objective will be to uncover key details such as the location of the murder, the timeline of events, and any contradictions in the evidence.

Round 2: Interrogation

- Volunteers will take on the roles of suspects and witnesses.
- Each team will be allowed to select three individuals for questioning.
- If the team remains uncertain, they will be granted two additional choices.
- Some seemingly irrelevant bios may contain hidden information - participants are encouraged to observe and think critically.

Round 3: Evidence Hunt

- Participants will take part in a scavenger hunt involving real objects, QR codes, and red herrings.
- Clues from earlier rounds must be used to guide their search and avoid distractions.
- Some objects will provide key evidence, while others are deliberately misleading.
- Success depends on observation, deduction, and strategic decision-making.

Round 4: Race to Clarity

- All six teams will receive a mix of clues, some of which do not belong to them.
- Teams must trade, converse, or strategically mislead others to obtain their missing information.
- Caution is essential - revealing too much could give other teams an advantage.

Round 5: Court of Cosmos - Final Showdown

- The final 3 teams face off in a courtroom setup.
- Present your full theory: Who, why, how, and when.
- Bonus surprise questions from a judge.

Judging Criteria

Round 1: The Incident Report - Case File Puzzle
Speed of solving the puzzle.
The first 20 teams to complete the task correctly will qualify.
Round 2: Time Trial - Interrogation & Inference
Time taken to reach a conclusion using limited questioning.
Efficiency in selecting relevant witnesses/suspects.
Ability to detect false or misleading information.
The fastest 12 teams with accurate deductions will move to Round 3.
Round 3: Evidence Hunt - Field Investigation
Completion of Required Evidence – 10 points.
Includes correct identification of the murder weapon.
Accuracy of Collected Clues – 10 points.
How well the team avoided red herrings and focused on real leads.
Time Taken – 10 points.
Faster completion with correct evidence earns higher scores.
The top 6 teams with the highest scores move on to round 4.
Round 4: Race to Clarity
Speed of compiling a complete and logical case theory.
Completeness of deductions based on previous clues and evidence.
The first 3 teams to submit a coherent, evidence-backed theory move to Round 5.
Round 5: Court of Cosmos - Final Showdown
Accuracy of Full Mystery Resolution – 20 points.
Correct identification of murderer, motive, timeline, and method.
Coherence of Argument – 10 points.
Structured, logical explanation using evidence gathered throughout the event.
Quality of Presentation and Teamwork – 10 points.
Clear delivery, shared responsibilities, and strong team coordination.
Bonus Points – Up to 10 points.
For identifying red herrings and convincingly proving them false.

Disqualification Criteria

- Tampering with other teams' materials or clues.
- Use of unauthorised external help or resources.
- Deliberate sharing of answers or spoilers between teams.
- Destruction, theft, or hiding of event materials.
- Use of mobile phones or the internet unless explicitly permitted.
- Verbal or physical misconduct towards volunteers, actors, or fellow participants.
- Failure to adhere to time limits after repeated warnings.
- Repeated disruption or refusal to follow instructions from event coordinators.

SPACE SURVIVAL

Event Description:

Space Survival is a Survivor-style elimination gauntlet set aboard a failing spacecraft. Teams of 4 - 6 crew members face six escalating crisis rounds alternating between knowledge challenges (physics MCQs, chemistry scenarios, alien cipher decoding) and physical builds (paper towers, knot-tying). After every round the weakest team is fully eliminated and several others lose a crew member, shrinking teams as pressure mounts. Survivors reach the Emergency Landing finale, where each team's remaining crew converts into either a trivia or a time advantage. Last crew standing wins.

Type of Event: Regular

Number of Rounds: 6

Team Size: 4 - 6

Rules and Regulations

Round 1: Reactor Meltdown (Knowledge)

Teams receive 10–20 MCQs on physics and basic engineering, conducted on Kahoot. Teams have 15 minutes to answer. Teams are ranked by score, after which the standard elimination mechanic is applied.

Round 2: Structural Collapse (Physical)

Each team is given exactly 10 sheets of paper and must build the tallest freestanding tower possible within the time limit. No other materials may be used. The tower must stand unaided for 10 seconds to be measured, with height recorded at the end of the round. The team with the shortest or collapsed tower is eliminated, followed by the standard elimination mechanic.

Round 3: Oxygen Leak (Knowledge)

Teams solve a logic puzzle and a chemistry-based scenario (gas mixture problems, pressure calculations), conducted on Kahoot. Teams have 15 minutes. Combined scores are ranked, after which the standard elimination mechanic is applied.

Round 4: Tether Snap (Physical)

Each team receives a rope of equal length and must tie the maximum number of knots possible within a 2-minute tying window, using only one hand per member. Members tie knots individually and sequentially; the team total is the sum of all valid knots. Only secure, distinct knots count - loose loops do not qualify. A judge verifies and counts valid knots at the end of the round, after which the standard elimination mechanic is applied.

Round 5: Alien Intercept Signal (Knowledge)

Teams decode a cipher or solve a pattern-recognition puzzle representing an intercepted alien transmission. Teams are ranked by decoding accuracy, after which the standard elimination mechanic is applied.

Round 6: Emergency Landing (Mixed, Final)

Before the round begins, each surviving team privately declares one advantage type - Trivia Bonus (each surviving crew member = +1 point added to the team's final trivia score) or Time Bonus (each surviving crew member = +15 seconds added to the team's card-stacking duration). All teams compete in both components: a card-stacking challenge followed by a rapid-fire trivia burst on Kahoot. The team with the highest combined score wins.

Tiebreaker: sudden-death trivia.

Judging Criteria

Round	Criterion	Basis of Evaluation	Outcome
Reactor Meltdown	MCQ Score	Ranked across all teams	Bottom team eliminated; next 5–7 teams lose one crew member each.
Structural Collapse	Tower Height	Ranked; tower must stand unaided for 10 seconds	Shortest/collapsed tower eliminated; next 5–7 teams lose one crew member each.
Oxygen Leak	Combined Score (logic + chemistry)	Ranked across all teams	Bottom team eliminated; next 5–7 teams lose one crew member each.
Tether Snap	Total Valid Knot Count	Ranked; judge inspects and counts valid knots	Bottom team eliminated; next 5–7 teams lose one crew member each.
Alien Intercept Signal	Decode Accuracy	Ranked across all teams	Bottom team eliminated; next 5–7 teams lose one crew member each.
Emergency Landing	Card Stack Height + Trivia Score	Stack height converted to points and ranked; trivia scored per correct answer; declared advantage applied to its component.	Highest combined score wins. Tiebreaker: sudden-death trivia.

Disqualification Criteria

- All team members must be present at the venue before the event begins.
- Teams arriving more than 10 minutes after the first round begins will not be permitted to join.
- Crew members may not be swapped once the event starts.
- Eliminated crew members must remain in the designated "dead zone" and may not assist their team. Eliminated members found communicating with or assisting their team will incur a further crew-member penalty for that team.
- Any team reduced to zero crew members before the final round is immediately eliminated from the event.

- Use of electronic devices (phones, smartwatches) during knowledge rounds, except those provided by organizers, will result in immediate disqualification.
 - Physical interference with another team's task (disrupting a build, sabotaging a puzzle) results in disqualification.
 - Unsportsmanlike conduct, abuse of organizers or participants, or refusal to follow event rules will result in immediate disqualification.
 - Organizers' decisions on round outcomes and penalties are final.
-

CRYPTOSS

ORDER OF CHAOS

Event Description:

Order of Chaos is a three-hour individual coding contest combining twenty Data Structures and Algorithms problems across three difficulty levels with a live strategic layer. Participants earn points by solving problems and may spend them on buffs, debuffs against rivals, or as collateral in direct typing challenges against other players, all reflected in real time on the leaderboard. The format rewards both algorithmic proficiency and competitive strategy, allowing strong tactical play to outweigh raw problem-solving output, and vice versa.

Type of Event: Regular

Number of Rounds: 1

Team Size: 1

Rules and Regulations:

- The contest is strictly individual; no teams are permitted.
- There are twenty questions distributed across three difficulty levels: Easy (200 points), Medium (350 points), and Hard (500 points).
- All participants begin the contest with 200 points.
- Participants must use the on-site online IDE and pass all test cases to earn points for a given question.
- There is no limit on the number of attempts permitted for any question.
- Participants may challenge any other player visible on the leaderboard to a typing contest, staking their own points as collateral. The winner takes the full pot, after which both participants enter a two-minute cooldown period.
- Special items (buffs and debuffs) may be purchased from the in-contest shop using accumulated points. Attacks may be directed at any player on the leaderboard or on the attacker's list.
- Participants may not change their network connection after registering on the leaderboard without prior approval from the organizers.

Judging Criteria

Final standings are determined by each participant's total point balance at the end of the three-hour contest window. This balance reflects the cumulative outcome of these factors:

Problem Solving Points	Head-to-head challenge outcomes
Points earned by successfully passing all test cases for Easy, Medium, and Hard questions.	Points won or lost through typing contests, where the winner takes the full pot staked as collateral.

Disqualification Criteria

- Team participation or collusion: Sharing solutions, strategy, or leaderboard coordination with another participant, given the contest's strictly individual format.
- Unauthorized network changes: Changing network connection after registering on the leaderboard without prior organizer approval.
- Use of unauthorized tools or resources: Using external code assistance, pre-written solutions, or any tool not permitted by the on-site IDE environment.
- Test case manipulation: Attempting to bypass, hardcode against, or otherwise exploit the test case system rather than genuinely solving a problem.
- Exploiting bugs or vulnerabilities: Deliberately exploiting flaws in the shop, leaderboard, typing challenge system, or IDE for unfair advantage.
- Abusive conduct: Harassment, abusive language, or disruptive behaviour directed at other participants or organizers, including during typing challenges.
- Impersonation or credential misuse: Competing under a false identity or allowing another individual to compete on one's behalf.

EULER'S SPHERE

Event Description:

Euler's Sphere is a team-based competition spanning three rounds, each testing a different mode of thinking. Round 1 covers computational mathematics and algorithmic problem-solving in the tradition of Project Euler. Round 2 tests game theory through strategic, interactive challenges where each decision affects both a team's own outcome and their opponents'. Round 3 requires extracting conclusions from provided datasets under time pressure. Teams of up to three are built to reward divided responsibilities across mathematics, strategy, and analysis rather than individual effort alone.

Type of Event: Regular

Number of Rounds: 3

Team Size: 1 - 3

Rules and Regulations

Round 1:

Round 1 focuses on computational mathematics and algorithmic problem-solving in the tradition of Project Euler.

Teams consist of one to three members, as registered for the overall event.

All submissions must be the team's original work; plagiarism or use of unauthorised resources will result in disqualification.

Decisions made by the organising committee are final.

Round 2:

The round is open to teams that qualify from Round 1.

The round consists of multiple interactive game-theory games and strategic challenges.

Teams earn one stamp for each game won.

The 5 teams with the highest number of stamps at the end of the round qualify for Round 3.

All decisions must be made within the round's time limit; the organising committee's rulings on gameplay disputes are final.

All participation must be the team's original strategic decision-making; collusion with non-participating parties is prohibited and will result in disqualification.

Round 3:

Round 3 requires teams to analyse provided datasets and derive solutions from them under time pressure.

Only teams that qualify from Round 2 are eligible to compete.

All conclusions and submissions must be derived solely from the datasets provided by the organisers.

All submissions must be the team's original work; plagiarism or use of unauthorised resources will result in disqualification.

Decisions made by the organising committee are final.

Judging Criteria

Round	Judging Criteria
Round 1: Computational Mathematics	Teams are evaluated on the number of problems solved correctly.
	Ranking is determined by timestamp, with teams that solve problems earlier ranked higher.
	A cutoff number of top-ranked teams advance to Round 2.
Round 2: Game Theory (Passport Gauntlet)	Teams earn one stamp for each interactive game or strategic challenge won.
	Final ranking is determined by total stamps accumulated within the 45-minute round.
	In the event of a tie in stamp count, the tiebreaker is time, with the team completing their wins faster ranked higher.
	The 5 teams with the highest stamp count qualify for Round 3.
Round 3: Data Analysis	Teams are evaluated on deriving the correct answer from the provided datasets.
	Standings are determined by which team finishes with the correct answer first.
	The team with the fastest correct submission is ranked highest.

Disqualification Criteria

- Plagiarism or unauthorised resources - Use of plagiarised work or resources not authorised by the organisers in any round will result in disqualification, as explicitly stated in the event's core rules.
 - Exceeding team size - Fielding more than three members, or substituting members not registered for the team, is grounds for disqualification.
 - Collusion between teams - Sharing solutions, strategies, or answers between competing teams at any round is prohibited.
 - Interference with Round 2 gameplay - Any attempt to manipulate, exploit, or interfere with the interactive game-theory challenges outside the intended rules of each game.
 - Fabrication in Round 3 - Submitting conclusions not genuinely derived from the datasets provided, or misrepresenting data analysis methods.
 - Abusive conduct - Harassment or disruptive behaviour directed at other teams, TTC collaborators, or organisers.
 - Non-compliance with organiser decisions - As stated in the core rules, decisions made by the organising committee are final; refusal to comply may result in disqualification.
-

KERNEL

CAPTURE THE FLAG

Event Description:

It is a cybersecurity competition where participants search for hidden text strings called “flags” by exploiting vulnerable programs, systems, or websites. These flags are hidden in challenges designed to test a wide range of cybersecurity knowledge including cryptography, reverse engineering, web security, forensics, and more. Participants must solve each challenge using technical skill, logical thinking, and teamwork. The event encourages ethical hacking and awareness of digital vulnerabilities through hands-on problem solving.

Type of Event: Regular

Number of Rounds: 1

Team Size: 1 - 3

Rules and Regulations

- The flag should be in the correct format (would be mentioned on the website).
- No points for partial flags.
- Questions can be attempted in any order.

Judging Criteria

Round 1
Team with the most solved questions in the least amount of time wins.

Disqualification Criteria

Participants will be banned from the leaderboard if the following activity is observed:

- Flag Sharing: Sharing, exchanging, or posting flags with others instead of solving challenges independently.
- Tampering with Infrastructure: Any attempt to attack, modify, or disrupt the CTF platform, scoreboard, or challenge services beyond their intended scope.
- Collusion: Collaborating with individuals or teams outside the permitted team size or exchanging solutions/flags between teams.

- Misconduct in Discord/Community Spaces: Engaging in harassment, inappropriate behaviour, or posting/sharing flags, solutions, or hints in public channels.

PROMPT ARENA

Event Description:

Prompt Arena is a multi-stage prompt engineering and AI reasoning challenge where participants develop the ability to craft precise, context-aware queries that elicit accurate, relevant, and useful responses from AI systems, critical for maximizing AI efficiency in professional settings. Participants will interact with a series of LLM-powered conversational agents, each configured with specific roles, permissions, and behavioral constraints. These agents hold fragmented knowledge and require strategic promptings, sometimes involving information from other bots, to disclose hidden data. Teams must determine the relationships between roles, identify information sources, and extract a complete narrative by issuing highly targeted prompts. Token usage is tracked; minimizing prompt length and maximizing effectiveness is a critical factor in scoring.

Type of Event: Regular

Number of Rounds: 1

Team Size: 2 - 3

Rules and Regulations

- Each team will receive a unique login credential to access the event platform.
- Use of any external AI tools (including other LLMs), code injection, or unauthorized browser extensions is strictly prohibited.
- Prompts must be well-structured and relevant; excessive guessing, prompt flooding, or random inputs may result in disqualification.
- Teams are not permitted to collaborate or communicate with other teams during the event.
- Organizers reserve the right to disqualify any team found violating the event integrity or attempting to tamper with the AI systems.

Judging Criteria

Round 1
Whoever reaches the furthest in the storyline is declared as the winner.
Total number of tokens used during interaction
Time taken to reach the final objective (used only in the event of a tie).

Disqualification Criteria

- Use of unauthorised software, AI tools, or internet resources during the event.
- Attempting to manipulate or compromise the event website or AI backend.
- Collaboration between teams or sharing of prompts/solutions.
- Repetitive use of random or nonsensical input.

TECH MAFIA

Event Description:

Tech Mafia is a technology-themed social deduction game set in the fictional company NeoGrid Technologies, where a cyberattack has compromised the organization. Participants are secretly assigned roles such as Hacker, Cyber Analyst, System Administrator, or Employee. Through strategic discussions, investigations, secret actions, and voting, players must identify the hidden Hackers before they take control of the company. The event tests logical reasoning, observation, communication, strategic thinking, decision-making, and adaptability through multiple stages of gameplay.

Type of Event: Regular

Number of Rounds: 2

Team Size: 1

Rules and Regulations

- Participants will be assigned secret identities and will compete through a series of strategic interactions, discussions and decisions.
- Detailed gameplay instructions and role-specific rules will be explained by the event coordinators before the commencement of each round.

- Participants must follow the instructions provided by the event coordinators throughout the event.

Round 1: Office Breach

A cyberattack has disrupted NeoGrid Technologies, and not everyone in the organization can be trusted. Participants will enter the game with hidden identities and must rely on their observation, reasoning, communication and strategic thinking to uncover the threat within the organization. Through a series of interactions and decisions, participants will attempt to identify the individuals working against them. The highest-performing participants will advance to the final round.

Round 2: Final Board Meeting

The surviving and qualifying participants will enter the final stage of the investigation, where the stakes are higher and the situation becomes increasingly unpredictable. Participants will face new challenges and unexpected developments that will test their ability to adapt, reason under pressure and make strategic decisions. The participants demonstrating the strongest overall performance will be declared the winners.

Judging Criteria

Round 1
Legal Deduction
Strategic Decision-Making
Observation and Analysis
Communication and Persuasion
Active participation
Game outcome
Round 2
Logical Deduction
Strategic Thinking
Observation and Analysis
Communication and Persuasion
Adaptability to Cyber Events
Decision-Making
Game Outcome

Disqualification Criteria

- Revealing assigned roles outside the permitted game process.
 - Use of mobile phones or electronic communication during gameplay.
 - Seeking assistance from spectators or eliminated participants.
 - Unsportsmanlike conduct or abusive behaviour.
 - Deliberately disrupting gameplay.
 - Ignoring moderator instructions.
 - Cheating or colluding outside the permitted gameplay.
-

KRAFTWAGEN

OFFROAD MAYHEM

Event Description:

Offroad Mayhem is an exciting three-round RC car engineering challenge where teams of 2-4 participants assemble and modify their own vehicles using provided components. Teams must navigate specially designed obstacle tracks, earning points for successfully crossing checkpoints and completing obstacles. Each successive round introduces greater challenges, requiring participants to improve their vehicles and adapt their strategies. With points awarded for performance and time used as a tiebreaker, the event tests engineering, creativity, driving skills, teamwork, and problem-solving.

Type of Event: Flagship

Number of Rounds: 3

Team Size: 2 - 4

Rules and Regulations

Round 1: Build & Conquer

Teams will assemble an RC car using the components provided. After assembly, teams must navigate the designated obstacle track and earn points by successfully crossing checkpoints and completing obstacles.

Round 2: Modify & Race

Qualified teams will be given a stipulated amount of time to modify and improve their existing RC cars. They will then attempt a more challenging obstacle track. Teams will earn points for checkpoints and obstacles completed, while points will be deducted for going off-track.

Round 3: Final Mayhem

The qualified teams will again be provided time to modify their vehicles before tackling the most challenging obstacle track. Higher points will be awarded for difficult obstacles, while going off-track will result in a higher penalty. The team with the highest cumulative score will emerge as the winner, with completion time used to settle ties.

Judging Criteria

Criteria	Round 1	Round 2	Round 3
Checkpoint successfully crossed	10 points	15 points	15 points
Easy obstacle	3 points	5 points	5 points
Medium obstacle	5 points	7 points	7 points
Difficult obstacle	-	-	10 points
Going off-track	-1 point	-2 points	-5 points
Tiebreaker	Completion time	Completion time	Completion time

Disqualification Criteria

- Failure to assemble the RC car within the allotted time.
- Disassembly or detachment of any part of the RC car while attempting the track.
- Use of unauthorized components or equipment.
- Deliberate interference with another team's vehicle or the track.
- Any form of misconduct.
- Arguments against the judge's final decision.

PITSTOP

Event Description:

The experience of being part of a race team is offered through Pitstop, where a taste of the action is given. Teamwork, quick thinking, and fun under pressure are placed at the centre of this challenge. No experience is required, only energy and excitement are to be brought. A fast-paced challenge not to be forgotten is made ready.

Type of Event: Regular

Number of Rounds: 1

Team Size: 1 - 3

Rules and Regulations

- The ATV will be pre-positioned on stands by the organizers before each run.
- The objective is to remove and reinstall one designated wheel in the shortest possible time.
- The timer will start on the judge's signal and stop when the team declares completion and the vehicle passes inspection.
- Only the tools provided by the organizers may be used.
- Every team member must actively participate in the pitstop operation.
- All wheel nuts must be installed and tightened correctly.
- Teams must ensure proper wheel fitment before presenting the vehicle for inspection.
- Participants must not apply excessive force that may damage wheel studs, hubs, or tools.
- Any attempt to interfere with another team or event equipment will result in disqualification.
- The decision of the judges and organizing committee shall be final and binding.
- The removal of nuts must be done with given tools and the nuts for the other wheel must be tightened by hand.

Judging Criteria

Criteria	Points	Evaluation Parameters
Completion Time	80	Fastest team receives the full 80 points. Other teams are ranked proportionally based on completion time. Formula: $P_{run} = 80 * (T_{max} - T_{run}) / (T_{max} - T_{min})$ P_{run} – Points for the attempt made by the current team T_{max} – Maximum time taken by a team T_{run} – Time taken by current team T_{min} – Minimum time taken by a team
Wheel Removal	10	Proper removal of wheel with the use of given tools
Wheel Installation	10	Proper installation of the new wheel with all nuts tightened properly
Total	100	

Penalties

- Loose wheel nut: +10 seconds
- Missing wheel nut: +20 seconds
- Cross-threaded wheel nut: +20 seconds
- Incorrect wheel nut installation: +20 seconds
- Team member not participating: +10 seconds

Disqualification Criteria

- Unsafe behaviour around the vehicle.
 - Use of unauthorized tools.
 - Intentional damage to vehicle/components.
 - Misconduct with volunteers/judges.
 - Failure to follow instructions.
-

MECHATRON

BATTLESHIP

Event Description:

Battleship is a high-energy technical showdown where knowledge meets strategy and teamwork. From cracking technical challenges and investigating a simulated cybercrime to solving engineering puzzles, every round pushes you to think faster and play smarter. The battle culminates in a 10×10 LED arena, where teams fight for territory, deploy tactical advantages, and defend their fleet. Do you have what it takes to outthink, outplay, and conquer?

Type of Event: Flagship

Number of Rounds: 3

Team Size: 2 - 4

Rules and Regulations

Round 1: Technical Filter Quiz

Teams participate in a technical quiz consisting of multiple elimination sets covering engineering fundamentals, aptitude, electronics, robotics, programming, and logical reasoning. The top 28 teams advance to Round 2.

Round 2:

Phase 1: Operation Zero Day

Teams investigate a simulated cybercrime involving an AI startup using server logs, encrypted messages, financial records, and physical evidence to identify the saboteur, attack method, and motive.

The top 16 teams qualify.

Phase 2: The Decoding Gauntlet

Qualified teams enter themed engineering escape rooms based on AI, Robotics, Electrical, and Chemical Engineering.

Teams solve technical puzzles and ciphers under time pressure.

The fastest 8 teams advance to the finale.

Round 3: Battleship Arena (Grand Finale)

The top 8 teams compete on a custom 10×10 LED arena. Teams answer technical questions to earn strikes, Resource Points, and tactical advantages. They strategically locate and destroy opponents' ships while defending their own fleet.

Phase 1: Lightning Bracket Duels

8 teams are divided into two groups of 4.

The top 2 teams from each group advance.

Phase 2: Championship Finale

The final 4 teams battle on the full arena.

Resource Points can be used for Sonar Scan, Smoke Screen, and Targeting Jammer.

Winners are determined by territory controlled and surviving ships.

Judging Criteria

Round 1	
Total quiz score	Score
Tie-breaker	Fastest Submission Time
Round 2	
Operation Zero Day Correct Saboteur & Attack Method Correct Motive & Organization Correct Password Timeline Reconstruction Red Herring Identification Evidence Correlation Speed Bonus	30 20 20 15 10 5 +5
Escape Room Completion Tie-breaker	Fastest Verified Completion Time Higher Phase 1 Rank
Round 3	
Territory Controlled Surviving Ships Tie-breaker 1 Tie-breaker 2	10 points per tile 100 points per ship Most unsunk ships Most Resource Points Remaining

Disqualification Criteria

- Use of external resources during the quiz or escape room.
 - Tampering with game equipment or arena hardware.
 - Unsportsmanlike conduct or cheating.
 - Use of unauthorized electronic devices.
 - Interference with other teams or event staff.
-

MOTION MATRIX

FASTEST LINE FOLLOWER

Event Description:

An autonomous robot is to be designed and constructed so that the path can be detected and followed with both speed and accuracy. The track is to be navigated through the implementation of smart sensor logic and control systems, and completion is to be achieved in the least possible time. Every second is regarded as critical, and the utmost precision is required throughout the process.

Type of Event: Flagship

Number of Rounds: 2

Team Size: 1 - 4

Rules and Regulations

- **Bot Specifications:**
 - Must fit within a 15 cm × 15 cm × 15 cm box.
 - Weight must not exceed 5 kg.
 - Only self-built robots are allowed.
- No wireless communication is allowed during the run.
- 3 runs for each team. Max 3 minutes in total for all 3 runs.
- The race time will reset to zero on every run restart.
- The track is divided into checkpoints; completion is measured by the total time taken to cross all checkpoints.
- Each touch or manual intervention (such as adjusting the robot's direction) during the run incurs additional time as a penalty.
- Originality and quality of robot design and programming will be evaluated.
- The top teams with the best overall performance will qualify for the final round (number of teams depends on participation).

Judging Criteria

Round 1	
Positive Points	(+)
Time	50
No. of Checkpoints crossed	25
Originality of the bot design	25
Round 2	
Positive Points	(+)
Time	50
No. of Checkpoints crossed	25
Originality of the bot design	25

Disqualification Criteria

- Use of IR-reflective materials to affect other bots.
- Exceeding bot dimensions or weight.
- Wireless control via Bluetooth/RF.
- Magnetic interference with other bots.
- Use of ready-made bots or kits.
- Unsportsmanlike behaviour or rule violations.

MAZE SOLVER

Event Description:

The objective is to have a compact, fully autonomous robot (MicroMouse) designed and constructed to navigate a maze. The maze is to be entered from the START tile, and the path to the FINISH tile is to be found and completed in the least amount of time. The winner will be determined as the robot by which the maze is completed in the shortest time. All tasks and conditions are to be strictly adhered to ensure fairness and accuracy in the competition.

Type of Event: Regular

Number of Rounds: 2

Team Size: 1 - 4

Rules and Regulations:

- **Bot Specifications and Guidelines:**

- The Bot must be wireless and fully autonomous, with no human control during operation.
- The bot can be built using any robot kit or materials but must fit inside a 20×20×20 cm box at all times (length × width × height).
- Maximum weight allowed is 2 kg (including battery), with a tolerance of 5%.
- The design and construction must be primarily the original work of the team.
- The maze will consist of 8×8 blocks, with each block measuring 25×25 cm, with 10 cm high walls (The block size and maximum bot size are subject to change).
- The wall thickness, construction material, floor surface, and permitted dimensional tolerances will be specified during the technical briefing.
- The bot must pass a pre-event inspection for dimensions, weight, onboard power source, autonomy, wireless communication, and prohibited mechanisms before it is allowed to compete.
- Teams must declare their battery type and nominal voltage during inspection. Damaged, leaking, or visibly unsafe batteries are not permitted.
- Organizers may re-check the bot's dimensions, weight, electronics, battery, or communication hardware at any point during the event.
- All navigation, sensing, decision-making, and control must be performed onboard the robot. External computing or external sensor input is prohibited during a run.

- **General Requirements:**

- Technical timeout does not permit repositioning or reorientation of the robot except as specifically approved by the referee. Any repositioning of the robot shall be treated as touch assistance or an aborted run, as applicable.
- Taking pictures, recording of the maze, sharing maze information with other teams is not allowed. If this is found, both teams will be disqualified.
- The bot must not leave any parts behind during maze navigation.
- Bots may be taken for inspection before revealing the maze.
- The Micromouse Bot cannot jump over, fly, climb, scratch, cut, burn, mark, damage, or destroy any maze walls.
- No specific color scheme is mandated for the maze. The maze base/floor is not required to be black, the walls are not required to be white, and the top/finish marking is not required to be red. The organizers may use different colors or color combinations for the maze.
- Any wireless communication between the bot and operator is prohibited (e.g., Bluetooth, RF, Wi-Fi modules are not allowed).
- The controller unit must be embedded within the robot and cannot be external.

- The robot must be powered by an onboard power source such as a battery fixed to the robot; tethered or corded power sources are not permitted.
- No combustion-based energy sources are allowed.
- Allowed adjustments: Battery replacement, sensor tuning, speed changes, physical repairs within allowed time and touch limits.
- Teams must not place the bot inside the disclosed maze for the purpose of calibration, mapping, route testing, or gathering maze-specific information before its official run.
- The robot must not use any mechanism capable of intentionally damaging, marking, contaminating, or altering the maze surface or walls.
- The organizers may immediately stop a run if the robot presents a safety risk to participants, officials, equipment, or the maze.
- The organisers reserve the right to modify, revise, or update technical specifications, dimensions, equipment requirements, maze configuration, round format, timings, and other competition-related parameters when reasonably necessary for safety, fairness, technical feasibility, or event management. Any such changes will be communicated to all participating teams during the official Technical Briefing before the commencement of the respective round. Changes shall, wherever reasonably practicable, apply equally to all teams affected by the change. The specifications and instructions announced by the organisers during the Technical Briefing shall supersede conflicting provisions of this rulebook for that round.

Round 1: Qualifier Round

- Total time: 8 minutes (1 min for setup, 7 mins for gameplay).
- Each team gets up to 3 runs. A run counts when the bot moves from the START cell and reaches the designated FINISH cell. Fastest run time among the 3 runs is considered. Teams that do not successfully reach the FINISH shall not receive a qualifying time. If fewer than eight teams successfully complete the FINISH, the remaining qualifying positions shall be awarded based on the shortest number of traversable maze cells remaining to the FINISH, with the shortest time to the recorded final position used as the tiebreaker. No penalties apply.
- The START position shall be the designated bottom-left cell. The exact FINISH cell shall be announced during the technical briefing and clearly marked by the organizers.
- A run is considered complete when the bot reaches the designated FINISH condition as determined by the referee. Once the bot satisfies the FINISH condition, the run is considered complete even if the bot subsequently moves away from the finish area.
- **Technical Timeout:** Each team is allowed a total of 30 seconds of technical timeout during the round. The timeout may be used for minor hardware repairs such as loose wiring, sensor alignment, wheel/gear issues, or battery replacement. The gameplay

timer shall be paused during the approved technical timeout. No software, firmware, algorithm, or maze-specific information may be modified or entered during the timeout. All repairs must be completed within the permitted timeout.

- **Touch Assistance:** A maximum of 3 reorientations is permitted during the round. Touch assistance may only be provided when the referee permits it or determines that the bot is stuck. The bot must remain in the same cell from which it was lifted and must be placed at the centre of that cell with only its orientation changed. No penalty is applied for permitted touches in Round 1.
- **Maze rules:** After the maze is revealed, no maze-specific information may be entered into the bot. This includes coordinates, wall maps, manually derived routes, or any other information obtained from the disclosed maze. Teams may select between preloaded algorithms using approved switches or interfaces. No code, firmware, ROM contents, or maze-specific data may be uploaded, modified, or replaced after maze disclosure.
- **Run rules:** Each time the bot exits the START cell, a new run begins. If it re-enters the START cell without reaching the FINISH, or if the participants choose to end the run, that run is aborted. Once the bot satisfies the FINISH condition, the run is considered complete.
- **Judging:** Judges may request bot explanation, stop a run, disqualify teams, or intervene if the maze is at risk.

Round 2: Final Round

- Total time: 12 minutes (2 mins for setup, 10 mins for gameplay).
- The referee shall assign the START cell randomly from the designated starting positions. The team may orient the bot in any direction before the run, subject to referee approval.
- The exact FINISH cell and finish condition shall be announced before the round begins.
- After getting the start point, the team may choose an algorithm using a switch on the bot. The top 3 teams that complete the designated track from the assigned START position to the designated FINISH position with the shortest valid run time will be declared the winners.
- This round will have a different and a more complex maze from the first round.
- **Run:** Max 3 runs allowed. Fastest run time will be considered for final ranking.
- **Technical Timeout:** Each team is allowed a total of 30 seconds of technical timeout during the round. The gameplay timer shall be paused during the approved timeout. Minor hardware repairs, sensor alignment, wheel/gear repairs, and battery replacement are permitted. No software, firmware, algorithm, or maze-specific information may be modified or entered during the timeout.
- **Touch Assistance:** A maximum of 3 reorientations is permitted during the round if the bot is stuck. The bot must remain in the same cell and must be placed at the centre

- of that cell with only its orientation changed. A 5-second penalty will be added for each permitted touch.
- **Algorithm selection:** No maze data can be fed to the bot after disclosure. Only algorithm mode (left/right) can be switched using preset options. No code uploads or ROM changes allowed post-disclosure.
 - **Run rules:** Each time the bot exits the START cell, a new run begins. If it re-enters the START cell without reaching the FINISH, or if the participants choose to end the run, that run is aborted. Once the bot satisfies the FINISH condition, the run is considered complete.
 - **Judging:** Judges may request explanation of the bot, stop a run, disqualify teams, or intervene if the maze or rules are compromised.

Judging Criteria

All Rounds
Fastest time to reach the finish line, among all 3 runs.
Maximum of 3 runs allowed; the best time among them will be considered.
Only pre-approved human interactions are permitted. Any unauthorized contact will lead to penalties or disqualification.
Time penalties will be added according to the rules stated before.
Timer will pause for permitted hardware fix (up to 30 seconds), if granted by the referee.
No maze data input allowed after maze is revealed; only algorithm mode (left/right) may be switched.
In case of identical best times, the next-best valid run time will be considered. If teams remain tied, an additional tie-break run may be conducted under conditions announced by the referee.
If fewer than three bots successfully reach the FINISH, the remaining positions shall be awarded based on the shortest number of traversable maze cells remaining between the bot's final recorded position and the designated FINISH cell. The distance shall be determined according to the maze layout by the referee. If two or more bots have the same remaining cell distance, the bot that reached its final recorded position in the shortest time shall be ranked higher.

Timing and Run Validity

- The official timer shall start when the bot crosses the designated START boundary and shall stop when the bot satisfies the designated FINISH condition.

- A run is valid only if the bot reaches the FINISH without unauthorized human intervention.
- Permitted touch assistance shall be carried out only according to the rules of the respective round.
- Any unauthorized contact with the bot shall result in the applicable penalty or disqualification.
- If the gameplay timer expires before the bot reaches the FINISH, the run shall be recorded as invalid.
- Once the FINISH condition has been satisfied, the run is considered complete even if the bot subsequently moves away from the FINISH.

Disqualification Criteria

- Feeding any maze-specific data into the robot after the maze is revealed.
 - Changing ROMs or downloading programs/code after maze disclosure.
 - Unauthorized human contact with the robot during a run (except in allowed touch assist scenarios).
 - Use of any Wireless communication to operate or give instructions to the bot.
 - Causing damage to the maze or tampering with its structure.
 - Refusing or failing to comply with judges' instructions.
 - Repeatedly re-entering the start cell without reaching the destination (more than 3 invalid runs).
 - Using pre-mapped maze data or violating the algorithm switching rules post-maze disclosure.
 - Deliberately calibrating or testing the bot using the disclosed maze before the official run.
 - Failing a post-run inspection or being found to have violated bot specifications.
-

NEXUS

INNOFRAME

Event Description:

INNOFRAME compresses an entire design–build–test cycle into a single day. Teams of four begin by modelling a rollcage in the CAD software of their choice, integrating components supplied by the organizers. They then fabricate that design from PVC pipe of approximately 1 inch OD, using only the tools available on site. The finished rollcages are finally put through a series of tests that assess build quality and the safety of the mounted components. Points reward frames that are light, manufacturable, faithful to the CAD model, and intact after testing.

Type of Event: Regular

Number of Rounds: 3

Team Size: 4

Rules and Regulations

Round 1: CAD Modelling (0.5 hours)

Teams design a rollcage on any CAD software of their choice, integrating specific components provided by the organizers into their design. The model must be created from scratch during the round.

- Teams must not use any pre-existing files they may already possess.
- Teams must not tamper with the models of other participating teams.
- Teams will not be allowed to share devices with other teams.
- A penalty of 2 minutes applies each time a team seeks assistance for modelling.

Round 2: Manufacturing (1 hour)

Teams manufacture their Round 1 design using PVC pipes of approximately 1-inch OD, within the allotted one hour.

- Teams must only use the tools provided at the event site.
- Teams must not use materials belonging to other teams without the approval of that team and the CCs.
- Teams must not exceed the allotted time.
- A penalty of 2 minutes applies each time a team seeks assistance for manufacturing.

Round 3: Testing (0.5 hours)

The completed rollcages are subjected to a series of tests conducted by the organizers to assess build quality and the safety of the components mounted on them.

- Testing will be carried out only by the organizers; teams must not interfere with organizers during testing.
- No vandalizing of college property during testing.
- The decision of the judges and organizers on all test outcomes is final.

Judging Criteria

Round	Criterion	Points
Round 1: CAD Modelling	Weight of the rollcage on CAD.	10
	Manufacturability of the design.	10
	Time taken to complete the model.	10
Round 2: Manufacturing	Weight of the fabricated rollcage.	10
	Similarity of the build to the CAD model.	10
Round 3: Testing	Damage sustained by the rollcage (lesser damage, more points).	10
	Damage sustained by components mounted on the rollcage (lesser damage, more points).	10
Total		70

Disqualification Criteria

- Vandalizing college property.
- Arguing with the OCs or CCs.
- Not cooperating with other teams.
- Damaging equipment provided by the organizers.
- Not following time restrictions.
- Using pre-existing CAD files or receiving external assistance during any round.

CITYSCAPING

Event Description:

This offline event is designed to assess participants' skills in urban planning and budget optimization. Through participation in this event, project management skills are developed as tasks are effectively delegated within teams of two to five members, and innovative thinking among peers is encouraged.

Type of Event: Regular

Number of Rounds: 3

Team Size: 2 - 5

Rules and Regulations

Round 1:

- An initial budget of 500 crore currency units will be provided to every team.
- For every correct answer (out of 10 questions), the team will be awarded 50 crore currency units in addition to the initial budget.
- The questions will be focused on general knowledge and aptitude.

Round 2:

- Teams will be presented with three location options: one by the sea, one in the mountains, and one in the plains.
- They will use the funds they won in the first round to develop a commercial service.
- Their projects must adhere to sustainable building practices and avoid environmental harm, while also ensuring profitability within 10 years of construction completion.

Round 3:

- The team members must provide a detailed explanation of their city planning, including the building costs and materials used, energy-saving methods implemented, sustainable materials and practices incorporated into the structures, and their profitability predictions for the service.
- After their presentation, a panel of judges will ask follow-up questions based on the information provided and score the teams accordingly.

Judging Criteria

All rounds
Budget usage and cost optimization
Aesthetics & sustainability factor
Presentation skills

Disqualification Criteria

- Use of Mobile Phones or Unauthorized Devices.
 - Inability to Complete within the Stipulated Time.
 - Misconduct with the Organizing Committee or Core Committee.
 - Non-Adherence to Judges' Decisions.
-

QUARK

CHRONOHUNT

Event Description:

ChronoHunt is a two-day, three-round technical challenge that takes participants from fundamental electronics to real-world signal detection. The event begins with a pen-and-paper quiz covering electronics and basic numerical problem-solving. Qualified teams then move to a digital circuit challenge, where they use simulation tools to analyse circuits and troubleshoot configurations to unlock the receiver schematic. In the final round, teams build and use the receiver circuits to detect and locate hidden transmitters placed across designated areas of AB5.

Type of Event: Regular

Number of Rounds: 3

Team Size: 4

Rules and Regulations:

Round 1: Quiz Round

This round is a written, paper-based quiz intended to evaluate participants' foundational knowledge in electronics. The questions will cover basic concepts such as circuit components, Boolean logic and fundamental principles of electron physics. The quiz is designed to test both theoretical understanding and basic numerical problem-solving skills.

- Duration of the quiz: 30 minutes
- Format: Multiple Choice Questions and Numerical Problems
- No calculators or electronic devices allowed.
- No negative marking for incorrect answers.
- All questions carry 1 mark.
- Quiz will be conducted in pen-and-paper format.
- Top-scoring teams will qualify for the next round and receive the next clue.

Round 2: Puzzle Round

Round 2 is an immersive technical puzzle experience where teams must think, analyse, and adapt to uncover hidden clues. Each breakthrough reveals a new piece of the mystery, leading participants through an interconnected chain of challenges involving logic, patterns, and problem-solving. With limited attempts, hidden twists, and a final secret to uncover, the event creates an exciting race where every decision matters.

- Each team must follow the instructions provided at every checkpoint.

- Teams must work only with their registered members.
- The use of unfair means, external assistance, or sharing answers with other teams is strictly prohibited.
- Teams must submit their answers in the specified format.
- The team that successfully completes the challenge in the shortest valid time will be ranked highest.

Round 3:

In this thrilling final round, the selected teams will put their skills to the test by building and using custom receiver circuits to track hidden transmitter circuits scattered across AB5. The first team to successfully locate all transmitters and submit them wins Chronohunt.

- Each team must consist of the same members as registered for Round 1.
- Teams will be provided with the necessary technical details of the transmitter signal characteristics (such as frequency range, modulation type, and expected signal strength) at the start of the round.
- Teams are required to design and assemble their own receiver circuits based on the provided specifications.
- All transmitter circuits will be hidden within the publicly accessible areas of the AB5 building. Restricted areas will be clearly marked and off-limits.
- The number of transmitters and their locations will not be disclosed; teams must rely on their receivers and problem-solving skills.

Judging Criteria

Round 1
Each correct answer carries 1 mark.
The cumulative marks scored across all questions will be considered for each team.
The time limit will be uniform across all teams. In the event of a tie in cumulative scores, the team that completes the round in the least amount of time will be given preference.
Only the top-scoring teams will qualify for the next round.
Round 2
Accuracy: Correctness of answers, diagnoses, and solutions.
Completion: Number of challenges successfully completed.
Time: Total time taken to complete the competition.
Problem-Solving: Ability to analyse clues and make effective decisions.
Debug Efficiency: Number of attempts used and mistakes made.

Rule Compliance: Adherence to all competition rules and fair-play guidelines.
In case of a tie, the team with fewer penalties and debugging attempts may be ranked higher.
Round 3
Functionality of the receiver circuit made by the team.
Strategy, adaptability, and logical reasoning during the search process.
Time taken to locate all transmitters.
Verification of all located transmitters and submission of results.
Observed teamwork and division of roles during the hunt.

Evaluation Matrix:

Criteria	Round 1	Round 2	Round 3
Correct answer	+1 point	-	-
Successful completion of a level	-	+3 points	-
Checkpoint successfully crossed	-	-	+2 points
Tie Breaker	Completion Time	Completion Time	Completion Time

Disqualification Criteria

A team may be disqualified from Chronohunt at any stage of the competition under the following circumstances:

Technical & Rule Violations

- Failure to adhere to round-specific rules, such as not building their own receiver circuits in Round 3 or using unauthorised equipment.
- Tampering with or intentionally or negligently damaging any receiver.
- Using external communication devices (phones, Wi-Fi, Bluetooth, walkie-talkies, etc.) during Rounds 1 and 2.
- Attempting to interfere with or sabotage another team's equipment, progress, or members.

Behaviour & Conduct

- Demonstrating unsportsmanlike behaviour, including verbal or physical harassment of participants, organisers, or volunteers.

- Entering restricted or off-limits areas in AB5 during the Treasure Hunt.
- Causing intentional damage to AB5 property, event equipment, or surroundings.

Integrity & Fairness

- Attempting to cheat or circumvent the intended challenge, for example, by pre-discovering receiver locations or colluding with staff.
- Plagiarism or misrepresentation of circuit designs in earlier rounds, where applicable.
- Ignoring safety instructions or creating unsafe situations through careless handling of circuits, power sources, or mechanical tools.

Administrative Reasons

- Failing to report to a required round or check-in within the given time window without a valid reason.
- Ignoring warnings issued by the organising or judging committee.

BITFLIP

Event Description:

This competition is designed to challenge participants in their knowledge and practical skills in electronics. It will consist of two main rounds, each progressively testing theoretical understanding and hands-on circuit implementation. All problem statements will be Arduino-based and involve the use of sensors or other fun electronic components.

Type of Event: Regular

Number of Rounds: 2

Team Size: 3 - 4

Rules and Regulations**Round 1: Quiz Round**

The first round is a quiz containing different question types and twists designed to evaluate participants on basic electronics, Arduino fundamentals, sensor concepts, and logical reasoning. The questions may include MCQs, pictorials, riddles, etc.

Round 2: Circuit Building Round

Teams will implement an Arduino-based hardware solution based on a given problem statement using the components provided. Teams will be required to be creative with the components provided and adhere to the designated theme for the final circuit.

Judging Criteria

Rounds	Judging Criteria	Points
Round 1	Accuracy	70
	Speed and problem-solving skills	30
Round 2	Functionality and Performance	35
	Reliability and adaptability	25
	System Design	15
	Innovation	15
	Presentation and Demonstration	10

Disqualification Criteria

- Use of internet resources during any round.
- Use of unauthorized devices or notes.
- Copying solutions, code, or hardware implementations from other teams.
- Tampering with another team's hardware or setup.
- Failure to comply with event instructions.
- Unsportsmanlike conduct during the event.

ROBOWARS

Event Description:

Robowars celebrates the sport of robotic combat through a contest of battling machines. Teams design, build, and control combat robots that engage in safe, controlled combat against rivals, showcasing engineering skill, creativity, and driving ability. Two weight categories are offered - Doge Weight (8 kg) and Feather Weight (15 kg) - both within a 100×100 cm footprint and operated via wireless control. Matches last 3 minutes with no timeouts, decided by knockout, judges' decision, or forfeit.

Type of Event: Flagship

Number of Rounds: 4

Team Size: 3 - 5

15 KG CATEGORY

- Number of Participants in a Team: 5 (minimum 3, up to 2 mentors allowed)
- Total number of Rounds: 4
- Duration of Each Round (including breaks):
 - Round 1 Duration: 3 hrs
 - Round 2 Duration: 3 hrs
 - Round 3 Duration: 2 hrs
 - Round 4 Duration: 2 hrs
 - Total Event Duration: 2 days

Rules and Regulations:

Double-elimination tournament: each team gets two chances to advance. Fixtures are drawn randomly via a chit system in front of the organizing team, and once drawn, cannot be changed. Each match lasts 3 minutes of continuous combat with no timeouts, followed by a 45-minute prep window before the next match.

Pre-Match Protocol: Teams must be ready 15 minutes before their match (3-minute grace period after final call, or disqualification). Machines are weighed in and inspected before every match. Inside the arena, teams must demonstrate activation/deactivation of the master switch and show working of weapon and mobility to judges for approval. A green card from the driver signals readiness.

In-Match Bout: Only 2 team members are permitted near the arena during the match; the rest stay in the designated area. No team member may enter the arena during combat - only organizers may intervene in an emergency. The match runs 3 minutes; robots compete via knockout, or the match goes to judges' decision if no knockout occurs.

Judging Criteria

Criteria	Description	Points
Damage	Reduction in the opponent's effectiveness/functionality structural, mechanical, or electrical harm to vital systems weakens their ability to continue; self-inflicted damage is also scored.	5
Aggression	How proactively and relentlessly a robot attacks or pursues its opponent, actively engaging rather than just chasing	3
Control	A robot's ability to dominate the match through skillful maneuvering, positioning, effective weapon/body use, and avoidance of the opponent's attacks.	3

Victory
Victory is by Knockout, Judges' Decision (based on the above), or Forfeit.

Disqualification Criteria

- Exceeding weight limits for the category (no tolerance given).
- Decorations that can't be removed within 3 minutes when required, or that act as a defensive weapon.
- Exceeding 60V on motion/weapon systems without demonstrating corrective understanding.
- Using IC engines, hydraulics, pneumatics, or flame-based mechanisms for any purpose.
- Testing weapons/springs outside the arena or without organizer supervision.
- Using prohibited weapons: entangling devices (nets, cables, string, glue, tape), smoke/blinding light/lasers, hazardous materials, explosives, EMP generators, liquid/gas squirting weapons, or invisible-damage weapons (electrical, RF, EMF).
- Battery not removed/reinstalled properly, or placed where it could short/catch fire.

- Failing to show up at the arena on time (with grace period).
- Being deemed unsafe by judges once the match has begun.
- Refusing to release an opponent after being instructed to stop a pin/lift (max 10 seconds allowed).
- Physical violence, verbal abuse, or harassment toward teams, organizers, or MIT staff/management (one warning, then disqualification).
- Working outside designated pit areas or misusing power tools/equipment.
- Violation of prohibited activities: smoking, alcohol, illegal drugs, firearms/explosives, or pointing lasers at others.

8 KG CATEGORY

- Number of Participants in a Team: 5 (minimum 3, up to 2 mentors allowed)
- Total number of Rounds: 4
- Duration of Each Round:
 - Round 1 Duration: 3 hrs
 - Round 2 Duration: 3 hrs
 - Round 3 Duration: 2 hrs
 - Round 4 Duration: 2 hrs
 - Total Event Duration: 2 days

Rules and Regulations:

Double-elimination tournament: Each team gets two chances to advance. Fixtures are drawn randomly via a chit system in front of the organizing team, and once drawn, cannot be changed. Each match lasts 3 minutes of continuous combat with no timeouts, followed by a 45-minute prep window before the next match.

SYNERGETICS

BIOWARS

Event Description:

BioWars is an event where survival is a game of strategy, knowledge and instinct. This event takes teams through the forces of evolution and the chaos of a biocrisis, challenging them to make calculated choices, decode clues, and put their scientific knowledge to the test. With every decision carrying consequences, teams will need to think critically, act quickly, and stay one step ahead. Think like a scientist. Play like a strategist. Survive the challenge.

Type of Event: Regular

Number of Rounds: 2

Team Size: 2 - 5

Rules and Regulations

Round 1: Plants vs Zombies

Adapt. Strategise. Survive. Guide your organisms through branching evolutionary pathways as you respond to changing environments, ecological pressures, and the strategies of your opponents. Every choice shapes your organism's journey, but with survivability hidden until encounters unfold, you'll have to rely on your ability to read the environment and predict which adaptations will prevail.

Round 2: Survival of the Fittest

Teams race through mini-games, with every victory earning them a chance to draw from a shared pool of cards that could either boost their survival or set them back. But the pool is limited. The faster you conquer the challenges, the more opportunities you have to claim the cards that could make all the difference. Once the biocrisis comes to an end, the teams with the highest survival scores face off in a rapid-fire true-or-false showdown, where knowledge and speed are put to the ultimate test.

Judging Criteria

Round 1: Plants vs Zombies
Teams face off in pairs and the winners of the Plants vs Zombies game advance to the next round.
Round 2: Survival of the Fittest
Teams race against each other solving mini-games to collect score cards awarding them points.
The team with higher points advances to a rapid-fire round where they must answer 10 questions correctly, in the shortest time span possible.
The team with the shortest time to 10 correct answers wins.

Disqualification Criteria

The following actions will lead to immediate disqualification of a team from the event:

- Accessing mobile phones, smartwatches, laptops, or any electronic devices during gameplay.
- Receiving hints or assistance from the audience, volunteers, or other teams.
- Mishandling or damaging event props.
- Ignoring instructions provided by coordinators or game masters.
- Use of personal insults or derogatory language.
- Arguing with organizers or trying to manipulate outcomes.
- If the team arrives more than 30 minutes late without any prior information, it can lead to disqualification.

CONTAGION-THE OUTBREAK

Event Description:

Contagion – The Outbreak is an engaging and challenging biomedical-based mystery event that includes elements such as solving problems, working in a team, communicating, and reasoning logically. Teams are required to collaborate within a timeframe in order to solve unique challenges, collect evidence, and piece together a fictitious outbreak in the laboratory. This event requires a focus on adaptability, critical thinking, and decision making as a team.

Type of Event: Regular

Number of Rounds: 2

Team Size: 3

Rules and Regulations

Round 1: Tests and Trials

The round tests the groups through six different stations which include puzzle-solving, games, logic, and biomedicine. Every member of the team is required to also abide by an assigned communication impairment test. The fastest teams that succeed in completing the rounds get promoted to the next level.

Round 2: Symptoms and Suspects

This round puts the teams in the situation where they are an emergency investigation team dealing with an outbreak in the lab. Through a number of tasks, they find clues from laboratory records, audio recordings, and testimonials to figure out the pathogen, its method of infection, patient zero, and the culprit.

Judging Criteria

Round 1: Tests and Trials
The first 6 teams to correctly complete the tasks will advance to the next round.
The maximum time is approx. 30 minutes, after which the number of successfully solved tasks will be taken into account.
If any team is unable to solve a particular sub-round, a time penalty is applied before they are given the clue.

Round 2: Symptoms and Suspects
Teams move through the given sub-rounds in the quickest time possible to gain different clues and solve the final case.
The team that solves the final case first, after solving the previous sub-rounds, will be declared the winner.
If any team is unable to solve a particular sub-round, a time penalty is applied before they are given the clue.

Disqualification Criteria

The following actions will lead to immediate disqualification of a team from the event:

- **Use of External Help:** Accessing mobile phones, smartwatches, laptops, or any electronic devices during gameplay.
 - **Gameplay:** Receiving hints or assistance from the audience, volunteers, or other teams.
 - **Tampering with Setup:** Mishandling or damaging event props, puzzles, or boxes. Accessing clues or items not meant for the current round.
 - **Rule Violation:** Ignoring instructions provided by coordinators or game masters. Attempting to skip rounds, solve out-of-order clues, or bypass puzzles.
 - **Unsportsmanlike Conduct:** Use of personal insults or derogatory language. Arguing with organizers or trying to manipulate outcomes.
 - **Late arrival:** If the team arrives more than 30 minutes late without any prior information, it can lead to disqualification.

VORTEX

ICARUS

Event Description:

Engineering and piloting skills are subjected to the ultimate test in this dynamic, hands-on challenge. Within a specified time limit, a glider is required to be designed and constructed on the spot using only the materials provided. Team capabilities are pushed to their fullest extent in this highly competitive offline event. In the grand finale, each glider is hand-launched by a team member, after which its performance is assessed to determine whether it fulfils the criteria necessary to be declared the best.

Type of Event: Regular

Number of Rounds: 2

Team Size: 1 - 3

Rules and Regulations

Round 1: Building

- Each team (a maximum of 3 participants and a minimum of 1) must construct their glider using only the materials provided by the organisers.
- Each team must strictly follow the dimensional and material constraints.
- Teams will be given 3 hours to build their gliders; they can also test the gliders during this time.
- No modifications are allowed after the time limit. Any changes made post-deadline will result in a 10% deduction from the total score.
- Only teams that submit an entirely constructed and flight-ready glider by the end of this round will qualify for Round 2.

Round 2: Flight Round

- Each team will have 3 flight attempts, out of which the best attempt will be considered for evaluation.
- Extra points will be awarded if the glider is able to carry a payload (eraser) that remains attached throughout the flight.
- Gliders will be judged based on range, stability, and payload retention.
- All decisions made by the jury will be final and binding.

Judging Criteria

Round 1: Building
Aesthetic appeal (10 Points)

Round 2: Flight Round
$\text{Score} = 1.5 \times X + 0.3 \times Y + 0.1 \times Z + 0.2 \times P$
X – Proximity to the Target (meters) Y – Glide Time (seconds) Z – Judge’s score (Design merit, Stability of flight, Quantity of materials etc.) (Scored out of 10) P – Payload (2 points for every eraser)

Disqualification Criteria

No specific disqualification criteria.

ESCAPE VELOCITY

Event Description:

Participants will design, build, and launch their own water-powered rockets using plastic bottles in a hands-on engineering challenge. Teams will be given a designated preparation period to construct and finalize their rockets. Each team will then launch their rocket using the provided launching system, with the freedom to choose their preferred launch angle. The rockets will then be evaluated based on the maximum horizontal range achieved, build quality, and overall design and visual presentation.

Type of Event: Regular

Number of Rounds: 2

Team Size: 2 - 4

Rules and Regulations

Round 1:

Build & Safety Scrutineering: Teams will have 2 hours to assemble their rockets on-site using the provided materials or pre-approved components. The primary pressure vessel must consist of a standard 1-litre beverage bottle. Altering the structural integrity of the bottle

pressure chamber (such as using chemical glues that melt the plastic or heat-forming) is strictly prohibited. Rockets must pass a safety inspection before moving to the pad.

Round 2:

The Launch Window: Each team will get 2 official launch attempts. The organizers will provide the launchers and pressure pumps to ensure a level playing field. Teams can adjust their water-to-air volume ratio and launch angle within specified safety limits before hitting the launch valve.

Judging Criteria

Evaluation Parameter	Weightage (Marks)
Flight Range	60
Design Robustness and Build Quality	30
Aesthetics	10
Total	100

Disqualification Criteria

- No disqualification rules apply unless a critical safety violation or an act of misconduct occurs.
